How to explore it ▶️ | Key takeaways ▶️

1 Dashboard map
How the one-page layout reads

2 Headline KPIs
Five numbers that frame everything

3 Rating quality
Where all restaurants land

4 Ratings vs votes
Do better places get noticed?

5 Cuisines
What people cook and how it scores

6 Price range
Cost tier vs customer rating

7 Delivery & booking
Services and their rating effect

8 Cities & map
Where the restaurants are

9 Top restaurants
The 4.9★ leaders

Anatomy of the one-page dashboard

1 **Filters** slice every panel

2 **KPI cards** five headline numbers

3 **Rating bands** restaurants vs avg votes

4 **Top cuisines** click to filter

5 **Rating categories** donut + total

6 **Top 5 restaurants** 50+ votes

7 **Price range** restaurants per tier

8 **Restaurant map** lon/lat points

9 **Cuisines × cities** top 5 × top 10

Tip: click a red badge to jump to that topic.

Five numbers frame the whole story

9,551

Total restaurants
141 cities in 15 countries

1,498,645

Total votes
Avg 157 per restaurant, median only 31

3.44

Average rating (of 5)
Rated restaurants only (7,403)

25.7%

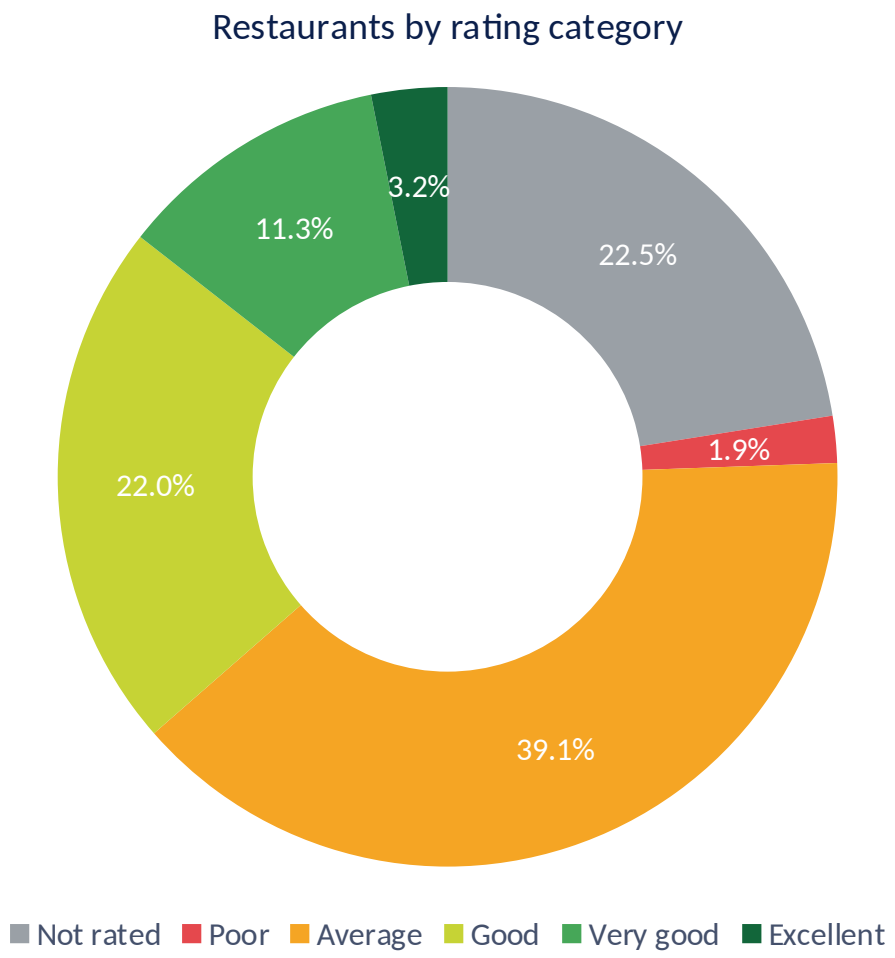

Online delivery
2,451 restaurants offer it

12.1%

Table booking
1,158 restaurants offer it

How to read the arrows: on the live dashboard each KPI shows ▲/▼ versus the full dataset. The 3.44 average excludes the 2,148 unrated restaurants (22.5%), so it reflects rated places only.

Only about 1 in 5 rated restaurants earns 4★ or better

39.1%

Average (2.5–3.4★)
3,737 restaurants: the biggest group

18.6%

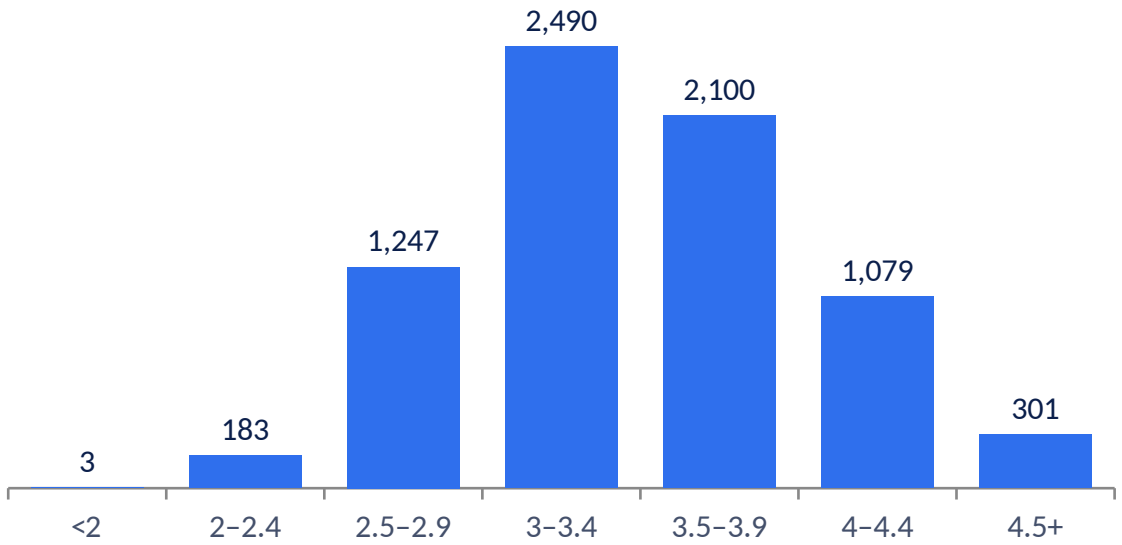

Rate 4.0★ or higher
1,380 Very good + Excellent, out of 7,403 rated

22.5%

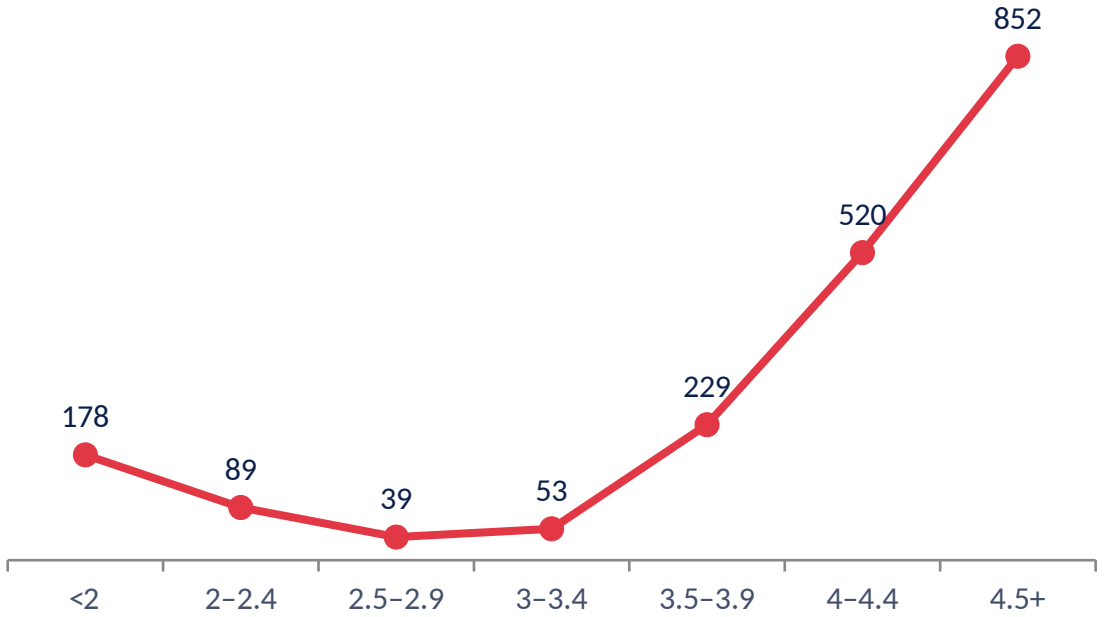

Not rated yet
2,148 listings have no rating: untapped feedback

Better ratings attract far more votes

Restaurants per rating band

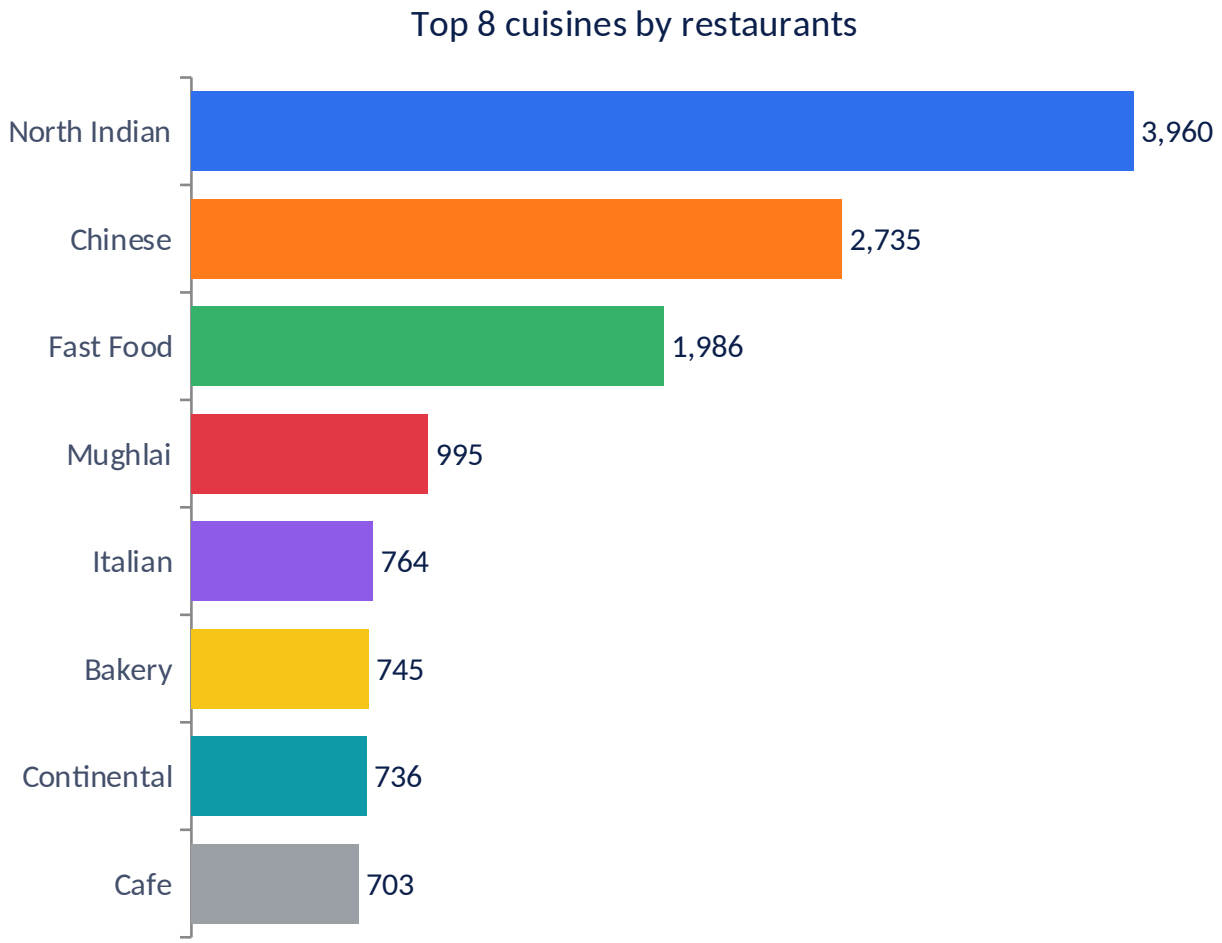

Average votes per restaurant

Votes climb from 53 (3–3.4★) to 852 (4.5★+): about 16× more attention. Caution: the <2★ band holds only 3 restaurants, so its 178-vote average is not meaningful.

North Indian, Chinese and Fast Food dominate the menu

145

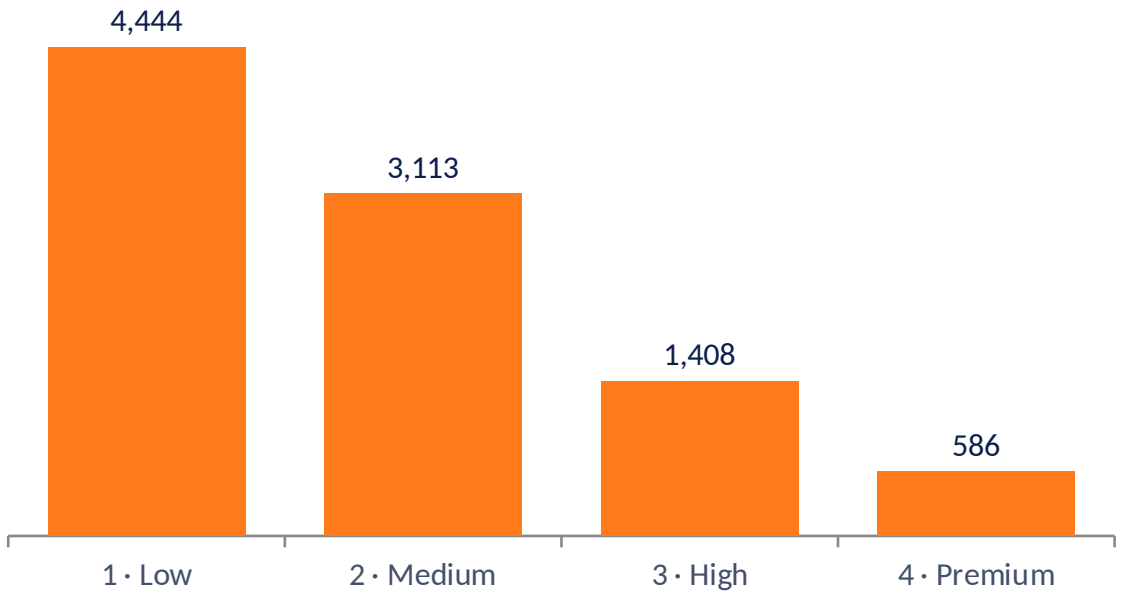

Distinct cuisines
The top 3 (North Indian, Chinese, Fast Food) cover 3,960, 2,735 and 1,986 listings

Popular is not the same as best-rated
Italian 3.75★, Continental 3.71★ and Cafe 3.68★ out-score North Indian 3.3★, Chinese 3.28★ and Fast Food 3.26★.

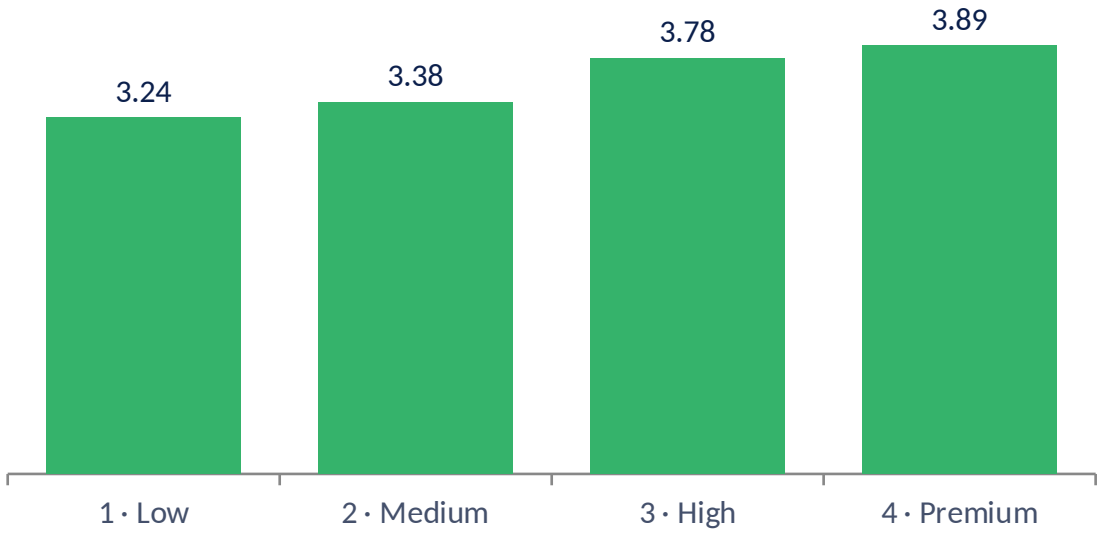

A restaurant can list several cuisines, so bars overlap and do not add up to 9,551.

Pricier tiers rate higher, but there are far fewer of them

Restaurants per price tier

Average rating per price tier

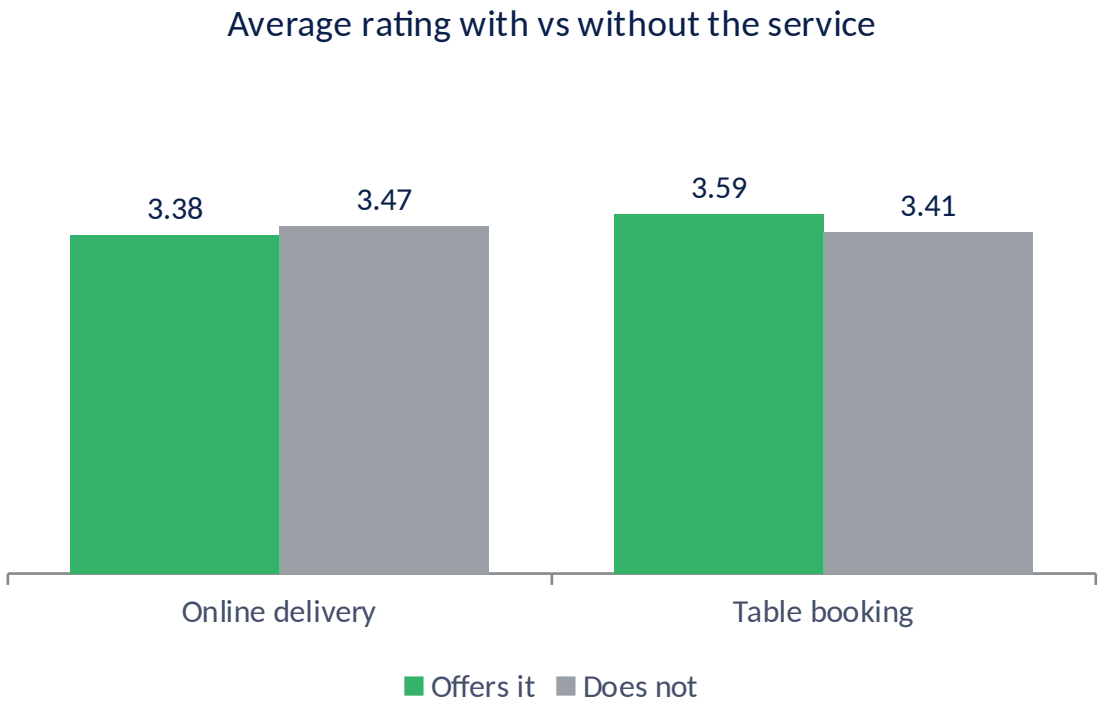

46.5%

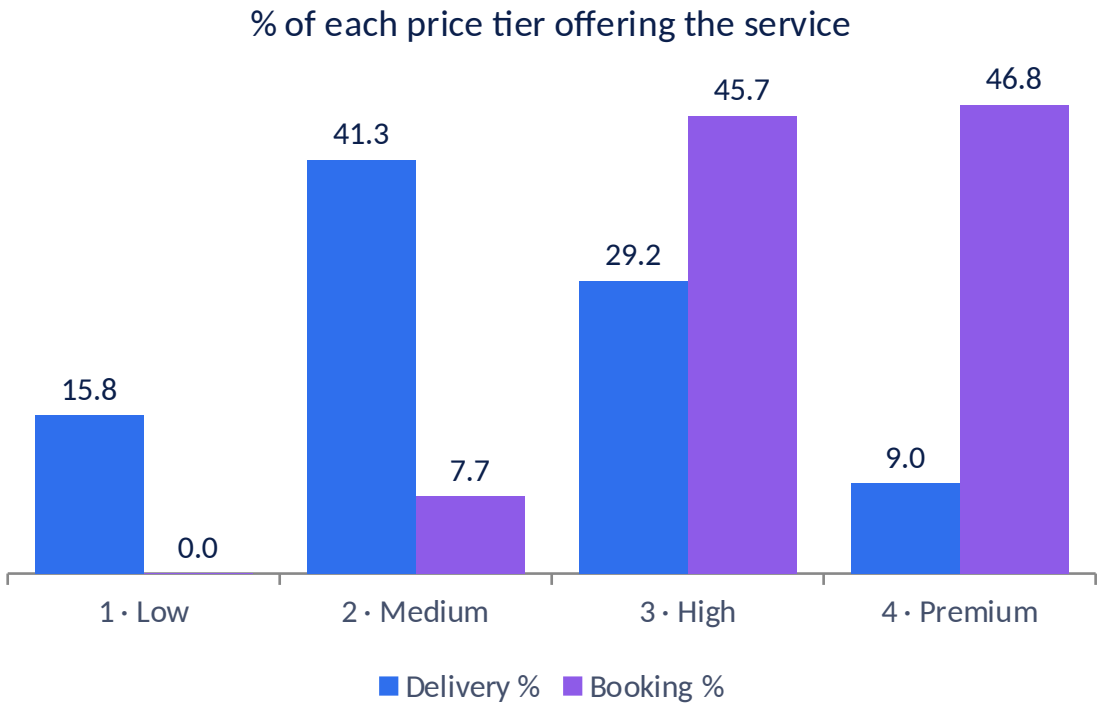

of restaurants are in the budget tier
vs only 6.1% in the premium tier

+0.65★

Premium vs budget rating gap
3.89★ against 3.24★ on average

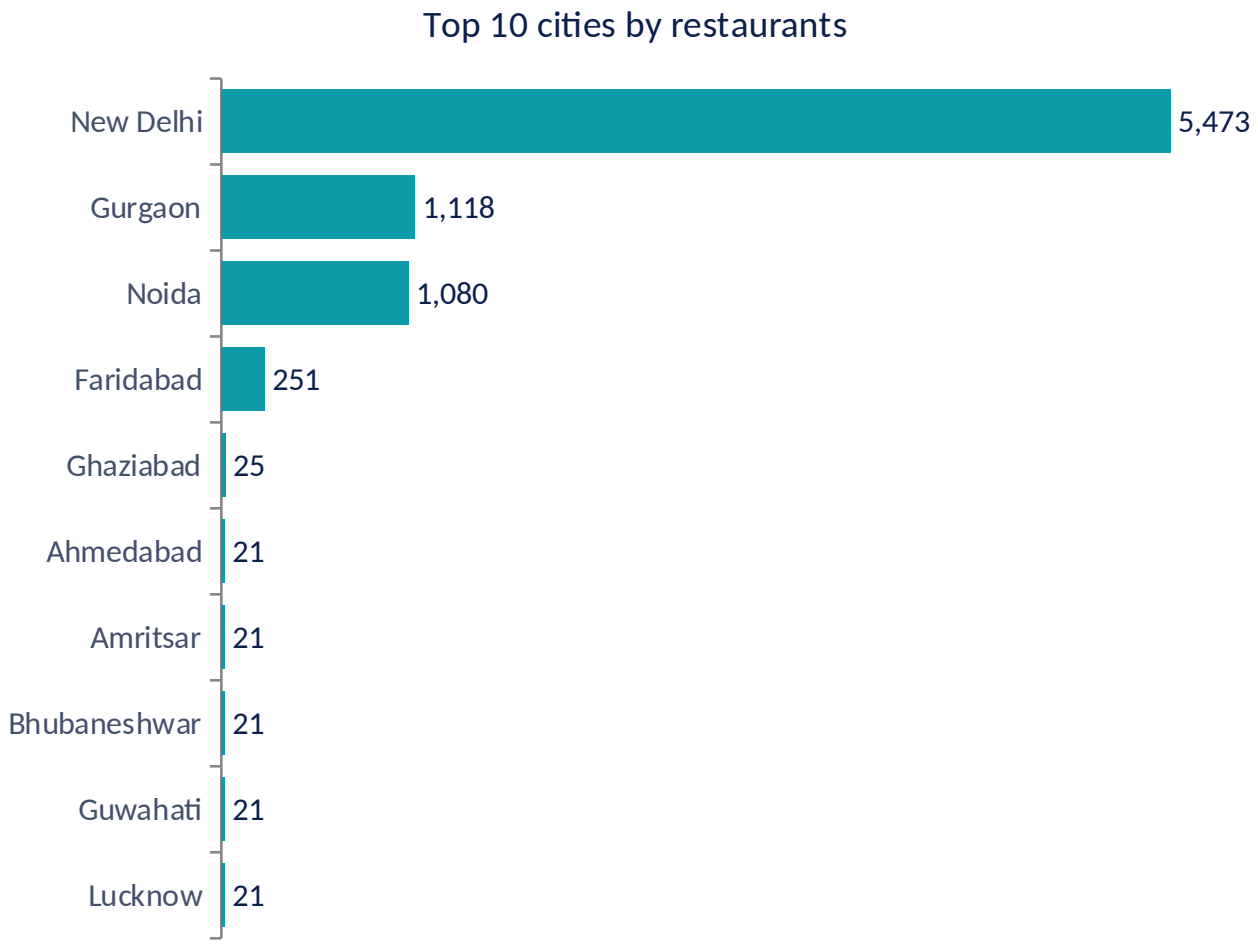

Booking tracks quality; delivery tracks affordability

Booking is a premium feature (46.8% of tier 4, 0% of tier 1), which likely explains its 3.59★ vs 3.41★ rating gap. Delivery peaks in the medium tier (41.3%). This shows association, not proof of cause.

Delhi NCR dominates: four cities hold 83% of restaurants

90.6%

of restaurants are in India
15 countries in total

57.3%

are in New Delhi alone
5,473 restaurants

Reading the map & small samples
The map plots longitude and latitude, colored by rating. Beyond the top 4 cities no city has more than 25 restaurants, so avoid city-level conclusions there.

Five 4.9★ restaurants lead the leaderboard

#	Restaurant	Cuisines	City	Votes	Rating
1	**Barbeque Nation**	North Indian, Chinese	Kolkata	5,966	4.9 ★
2	**AB's - Absolute Barbecues**	European, Mediterranean, North Indian	Hyderabad	5,434	4.9 ★
3	**Mirchi And Mime**	North Indian, South Indian, Mughlai	Mumbai	3,244	4.9 ★
4	**Naturals Ice Cream**	Ice Cream	New Delhi	2,620	4.9 ★
5	**McGuire's Irish Pub & Brewery**	Burger, Bar Food, Steak	Pensacola	2,238	4.9 ★

Ranked by rating, then votes (50+ votes to qualify). All five have 2,238–5,966 votes, so the 4.9★ is well supported. Two of the five are barbecue buffets, and they sit in five different cities.

Explore it yourself: four ways to interact

Filter

Use Country, City, Cuisine and Price range dropdowns. Every panel and KPI updates.

Click to cross-filter

Click a cuisine bar, a donut slice or a price column. Click it again to clear.

Compare to overall

KPI arrows ▲▼ show how your selection differs from the whole dataset.

Hover for detail

Tooltips on the map show each restaurant's name and rating.

Open the live dashboard ↗

Try it: set Cuisine = Italian, then click a price column and watch the KPIs change.

What the dashboard tells us

18.6% of rated restaurants reach 4★+. Quality is scarce.

16× more votes at 4.5★+ than at 3–3.4★: ratings drive visibility.

+0.65★ premium tier advantage; booking is a premium feature.

3.38 vs 3.47 delivery vs non-delivery rating: delivery is not a quality signal.

Keep in mind

- No dates in the data, so no trends over time
- Costs use local currencies, so price tiers are used instead
- Outside Delhi NCR, city samples are tiny
- 2,148 unrated listings are excluded from averages
- Patterns are associations, not proof of cause
